

Gustavo Peralta

AI Software Engineer

gussrw1@gmail.com | github.com/gussrw | linkedin.com/in/gussrw | Aguascalientes, México (open to remote)

AI Software Engineer and Tech Lead with **9+ years** of experience. Specialized in developing **multi-agent systems**, building scalable web architectures, and configuring **cloud infrastructure** and CI/CD integrations.

PROFESSIONAL EXPERIENCE

Escal8

AI Software Engineer

Aug 2024 – Sep 2026

- Developed **multi-agent systems** connecting foundation models (Google Gemini, Anthropic Claude) through the **AWS Bedrock and Vertex AI** platforms.
- Built **MCP servers** (Model Context Protocol) from scratch to securely connect AI agents to databases and external APIs, giving them **real-time context**.
- **Optimized API consumption** and reduced latency by tuning context windows, selecting the ideal model for each process, and applying **prompt engineering** techniques.
- **Scaled the backend architecture** (PHP, Python) and the Moodle environment to handle the load of new AI tools in production without affecting performance.
- Integrated **AI assistants** (Claude Code CLI, Google Antigravity) into the team's workflow to **accelerate development** and technical incident resolution.
- Configured **CI/CD pipelines** to automate production releases and managed servers on AWS and Linux, ensuring **system stability**.

CCEO Software Development

Chief Technology Officer (CTO)

Jul 2022 – Aug 2024

- Defined the **technical architecture** and technology strategy, evaluating third-party APIs and guiding the team in adopting new tools across several parallel projects.
- Improved code quality and eased onboarding of new developers by implementing **code reviews**, static analysis (ESLint), and agile workflows.
- Managed **production infrastructure** on Linux servers (firewalls, Datadog) and automated deployments with **GitHub Actions**, eliminating manual work and reducing release errors.

Full Stack Developer

Sep 2017 – Jul 2022

- Built **full web applications** using Laravel and relational databases (MySQL/PostgreSQL) on the backend, along with dynamic JavaScript and Vue.js interfaces.
- **Improved application speed** by refactoring database queries and redesigning the interface for a better user experience.
- Translated business requirements into technical specifications, following each project from kickoff to **deployment** to ensure on-time delivery.

MyShell Software Lab

CEO & Founder

May 2018 – Present

- Created and maintain an **ecosystem of open-source tools** (including TaskFlow and Vue/Laravel utilities) focused on streamlining the development cycle.
- Lead **end-to-end management on GitHub**: defining next technical steps, reviewing pull requests, and resolving issues reported by the community.
- Improved the **developer experience (DX)** by building ready-to-use modules and test environments that eliminate hours of manual work for other developers.

PROJECTS

- **Coyfi:** Built an electronic invoicing (CFDI) platform, currently in production (with management, administration, client portal, and website modules). To isolate each client's data, implemented a **multi-tenant architecture** with distributed databases, and integrated **multiple PACs** (authorized certification providers) to keep invoice stamping always available.
- **TaskFlow:** Built a collaborative product management platform (Next.js, TypeScript, MongoDB, Socket.io). To speed up planning, integrated an **AI copilot** (Gemini/Bedrock) that takes requirements and generates **automated tasks** on a drag-and-drop board.
- **Ajax Laravel Validator:** Published an open-source npm package for Vue.js (**3,000+ annual downloads**) that connects client-side validation with the backend, processing Laravel FormRequest errors directly in the UI.
- **BBVA TPV:** Integrated BBVA card terminals into a point-of-sale application built in C# and .NET, supporting sales, refunds, cancellations, reward-point payments, and cash withdrawals.
- **Prefectos:** Replaced manual teacher-attendance tracking at Instituto Tecnológico de Aguascalientes with a **real-time web platform** built with Laravel and Vue.js, linked to a **native Android** app.

TECHNICAL SKILLS

Languages: JavaScript/TypeScript, Python, PHP, C#
Artificial Intelligence: LangChain, MCP (Model Context Protocol), Prompt Engineering, Vertex AI (Gemini API), AWS Bedrock, RAG
Frontend: React, Vue.js, Tailwind CSS
Backend: Laravel, FastAPI, Node.js, .NET
Databases & Caching: MongoDB, MySQL, Redis
DevOps & Infrastructure: Docker, AWS, GitHub Actions (CI/CD), Linux Servers (Ubuntu/Debian)
Mobile: Flutter, Android (Native Java/Kotlin)

EDUCATION & CERTIFICATIONS

M.S. in Artificial Intelligence Instituto Tecnológico de Aguascalientes	Jan 2026 – Present
B.S. in Information and Communication Technologies Engineering Instituto Tecnológico de Aguascalientes	Aug 2014 – Jul 2019

Key Certifications:

- AI Engineering – Henry (2026)
- Google Data Analytics (2023)

Languages: Spanish (Native), English (B2)
